Description:

The proposed event aims to present some of the Milano innovative experiences of district-based solutions as a Carbon Neutral city facing climate change and promoting urban regeneration, mobilizing all key players and providing for a broad involvement of civil society, private sector, public administrations and research.

The event will be organised in roundtables, starting from the Milano experiences and scaling to an international perspective. A goal of the event will be to contribute producing a "lessons learned notice" on Carbon Neutral and Smart Cities, useful for the sharing of the Milano experiences and proposed model to other urban areas at city and territorial level and for the successful engagement of citizens, policy makers, Public Administrations and Real Estate operators.

The event's work will take place partly in Italian and partly in English.

Thematic focus:

Zero Carbon Cities
Smart Sustainable Districts

Community Engagement
Behavioural Change

Urban Regeneration
Ecological Transition

RES and Energy Efficiency
Sustainable Mobility

Circular Economy
Just Transition
