

Jan Jongert, [REDACTED] studied in Delft between 1990 and 1996 and graduated as Architect at the Academy of Architecture Rotterdam in 2003.

"As cofounder of 1010Architecten in 1997 and Superuse Studios in 2012 in Rotterdam I design interiors and buildings and develop strategies to facilitate the transition to a responsible society. I focus at developing tools and processes and realise tangible projects that empower local exchange and production, as an alternative to transporting and wasting our resources, products and components around the globe. I specialise in the behaviour of flows in interior, industrial and urban environment. My fascination lies with shortcutting and interconnecting flows as a means to create new value and support a society that takes responsibility."
