**Ilaria Tonti**

Architetto e PhD at Politecnico di Torino

Co-founder research network TEMP- ETS

Segretario di hõferlab ass. cult. (Torino)

Membro direttivo dell'associazione culturale
C.A.S.A. – Cosa Accade Se Abitiamo (Frontignano, Ussita)

Architect and PhD in Architecture. History and Project at Politecnico di Torino, supported by two Interdepartmental Centres: *FULL* (The Future *Urban Legacy* Lab) and PIC4SeR (PoliTO Interdipartimental Centre for Service Robotics). Her research focuses on the permanence of temporariness in post-earthquake emergencies in Italian territories through design and geomatic tools. She studied architecture between Piacenza (BA-Politecnico di Milano) and Turin (M.Sc. - Politecnico di Torino). Her Master's thesis investigated the regenerative value of residual urban spaces and adaptive strategies in Turin. In 2019, she followed the research "FARB 2016 - Learning from catastrophes: methods, tools and techniques for the realisation of resilient settlement systems" of the Politecnico di Milano. Currently, she is a teaching assistant in Architecture and Urban Design, curator of seminar cycles and takes part in several research activities at Politecnico di Torino. She is co-founder of a independent interdoctoral research network "TEMP-"

Re-school. Re-thinking school spaces under conditions of latent pandemic

Member of Research team

FULL – Future Urban Legacy Lab | Interdepartmental centre | Politecnico di Torino

Principal investigator: prof. Matteo Robiglio | Project coordinator: Caterina Barioglio

In collaboration with Fondazione Agnelli, Torino

<https://full.polito.it/research/re-school/>

<https://www.fondazioneagnelli.it/2020/08/03/farespazio/>

The perspective of returning to attend school in person after the first lockdown phase in Italy called into question the spaces of existing school buildings: the management of activities in class, the in-and outflows of people, the organisation of daily breaks or the movements of students inside and outside the buildings are just some of the many challenges posed by the current epidemic emergency to primary and secondary schools. Starting from these very concrete problems and re-contextualising them into a broader perspective, the Future Urban Legacy Lab (FULL), in collaboration with Fondazione Agnelli developed a project to intervene in schools' spaces with a twofold aim. On the one hand, the research project is intended to provide operative solutions to identify and adapt existing spatial resources in order to ensure the best conditions for a safe return to school. On the other hand, a wider purpose of this work is to address strategic planning actions in order to activate a process of renovation of the school building heritage in the medium and long-term

“FARB 2016 – Imparando dalle Catastrofi: metodi, strumenti e tecniche per la realizzazione di spazi urbani resilienti”

FELLOWSHIP FOR RESEARCH ACTIVITY

Politecnico di Milano - DASTU Dipartimento di Architettura e Studi Urbani

Project coordinator (DASTU PoliMI): prof. Andrea Gritti;

Research coordinator (PoliTO): prof. Massimo Crotti

The day after the seismic sequence, which devastated Central Italy between August and October 2016, the FARB 2016 research, "Learning from catastrophes", activated networks - national and international - for collaboration on post-disaster reconstruction issues and signed research agreements with community included in the "crater" of the 2016 earthquake. In particular, the research group was dedicated to developing studies and proposals for the reconstruction of Castelsantangelo sul Nera, on the boundary between Marche and Umbria.

Collaboration and research activities, with the elaboration of mapping (GIS), diagrams, scenarios, for the definition of a methodological proposal and Preliminary Studies for the drafting of the D.D.R. (Documento Direttore per la Ricostruzione) of Castelsantangelo sul Nera (MC) inscribed in agreement with several Italian universities. The results of the activity carried out on the territory are formalised in the dossier "Preliminary studies for the drafting of the DDR".
